

Leader election and failover

- Leader needs to be an up-to-date replica
- If the leader has not failed, it should stay the same
- Backups don't need to know who the leader is
 - They just need to know that it is someone else....
 - The leader will make itself known!
- *Spread* sorts elements in a view alphabetically

Static order

- Select first in lexicographical order of the view:

FIFO order

- Need to remember others on join and wait until list is empty:
